

Vitamin C serum delivers results

New formula with pentapeptides - a protein based structure to stimulate collagen and elastin fibers.

Deb Markham | Paramedical Aesthetician

The power of Vitamin C has long been recognized as a major anti-oxidant, essential for keeping our bodies healthy and functioning. It is also well established that Vitamin C is essential for healthy skin and the production of collagen, specifically when applied directly to the skin. Our Enza Essentials Complex C Serum has been newly formulated with the addition of a protein based ingredient, pentapeptide. **This highly concentrated Vitamin C serum protects, hydrates and conditions the skin without irritation.** In a "bio-engineered" form that resembles the human cell,

the Vitamin C is absorbed into the skin and triggers the cells to produce more collagen. Enza Essentials Complex C Serum is compatible to all skin types and plays a vital role in skin repair and aiding skin resilience. **Vitamin C is highly recommended for those that are receiving Microdermabrasions, Chemical Peels and Laser treatments.**

An additional benefit to Vitamin C is its "super power" to stand up against the sun's strong UV rays. When your skin is improperly exposed to the sun, the UVA/UVB rays deplete the skin's Vitamin C reserve. Adding a topical Vitamin C product to your skin care regimen helps to prevent damage by decreasing the sunburn cell count that is exposed to sunlight.
